

GENERAL INFORMATION

ADHERE™ is a superior, concentrated “sticker”. It spreads the solution over the leave surface, then forms a pliable film containing the pesticide. The film will then resist “wash-off”. Since the film is flexible, the plant may grow without damaging the barrier formed by the solution containing the **ADHERE™**.

DIRECTIONS

1. Always follow label directions for rates and mixing order.
2. If no label statement is made, then you can use a rate of 3-12 oz./100 gal. (ground applications). Rates should be adjusted based on the amount of film desired.
3. Aerial applications are 3-6 oz. per acre.
4. **ADHERE™** is compatible with most materials. You should try a small amount before mixing in tank as pesticide formulations and carrier (H₂O, etc.) can have a great effect on compatibility.
